Product Specifications

Model: DSP-F2 (Plated Steel) & DSS-F2 (Stainless Steel) Center Mount Floor Sleeve - The Pelsue Models #DSP-F2 & #DSS-F12Floor Sleeves are designed to be installed on an existing horizontal surface. The mounting surface must be substantial enough in order to withstand the proofing loads reported within this document. The DSP-F2 & DSS-F2 Floor Sleeve can be bolted or welded to a steel surface or fastened to a concrete surface with appropriate concrete fasteners. When installed, each of the sleeves provides a fixed receiver for any PELSUE DK Series offset arm davit system. The DSS or Stainless Steel version of the sleeve provides additional durability in a corrosive environment.

General Specifications:

Product is Designed & tested to be used in 2 General Applications:

1. As a mounting point for an offset davit system to be utilized as a personnel or equipment lowering, lifting, and positioning device.
   Man Rated Load Capacity.............350 LBS. (159 KG.) Maximum at up to a 48” offset
2. As a mounting point for an offset davit system to be utilized as an anchorage for a personal fall arrest system.
   Compliance.............Designed and tested as an Anchorage for the attachment of Personal Fall Arrest Equipment as per OSHA Regulations (Standards 29 CFR) Part 1926

**Warning! A 900 LB. maximum arrest force fall arrest device must be used when this product is employed as part of a complete fall arrest system.

Materials & Construction:

General Construction........Welded Carbon Steel
(DSP-F2) or Welded Stainless Steel
(DSS-F2)

Anti-Friction Components:

• Grey PVC Slip Plate & ABS Plastic Friction Sleeve.

Weight:

Weight.............25 LBS.

Mounting Requirements:

Metal Structure: Secure with 3/4”UNC SAE Grade 5 (ASTMA325) or better threaded fasteners and included 3/4” Hardened flat washers. Ensure that supporting structure will withstand tensile working loads in each bolt of 6050 Lb. (27 kN).

Concrete: Install Using concrete wedge-type anchors with a reported tensile working strength of at least 6050 Lb. (27 kN). Concrete Strength & thickness must be sufficient in order to meet or exceed the fastener manufacturer’s guidelines. **Contact Pelsue for additional assistance.

**NOTE - The Mounting Requirements shown on this document are guidelines for safe-installation. Consult the Proof Load Table in this document & have concrete & installation of system approved by installing engineer.
DS Series Permanent Sleeve Systems - Product Specifications

#### Additional Information

- **Proof Load**: Defined as the load attained on the structure and sustained by the structure for a period of 2 minutes with no visible signs of structural failure.
- **Fall Arrest Anchorage Compliance**: Dependent upon usage of product within manufacturer's guidelines and in conjunction with only approved PELSUE brand equipment and subcomponents.
- **Personnel Hoist & Retrieval Ratings**: Arrived at by PELSUE engineering taking into account test data for each structure, applicable standards, and overall good sense. Ultimately, published ratings should be used as a reference allowing the end user to arrive at a comfortable Factor of Safety based upon usage conditions and experience.
